Vinnytsia National Agrarian University,  
Department of the History of Ukraine and Philosophy

The article is devoted to the problem of future specialists in agrarian sphere vocational training. The training requirements have transformed much due to social and economic peculiarities of the society development. The formation of professional mobility helps solve the problem effectively under conditions of economic crisis, labour market instability, rapid engineering and technological changes which take place on the background of world economy globalization processes and the transition to postindustrial type of society

Actuality of the problem predetermines attention of scientists. There is a number of scientific papers written on the problem during the past years. They are scientific works by L. Amirova, O. Arkhangel'skyi, K. Boiarko, A. Vashchenko, L. Horiunova, O. Dementieva, V. Diunina, B. Ihoshev, Y. Ivanchenko, S. Kaplina, O. Kerdiasheva, M. Merkulova, T. Miasnikova, L. Sushentseva, I. Khomiuk, and others.

Scientists offer their ways of solving tasks of research which reflect specific character of the sphere of professional mobility development, future specialists' vocational training peculiarities and author's personal opinion. Though agrarian sphere is of a specific character, the formation of professional mobility hasn't found its application yet. Necessity of its model creation determines our attention to the peculiarities which must be taken into consideration while fulfilling the assignment.

Person's ideal which is a subject of education and demonstrates self-confidence, high adaptive possibilities and strives to take the world undivided with all its contradictions and complexities, displays activity, initiative and creative work in vital activity, strives to self-actualization in professional activity. Nowadays it can be realized due to professional mobility. Moreover, it gets principal meaning in modal building of future specialists in agrarian field professional mobility formation.

Statements of accepting person's individuality as a subject of knowledge with its abilities and experience are set as principles into foundation of modal building of future managers in agrarian sphere professional mobility formation. It is necessary to take account of experience to creating conditions of valuable demonstration and development of individual functions such as selectiveness. It makes possible to choose and reflect which provide valuation of life, searching of life meaning and creativeness through existence, formation function by means of "I" image creation, responsibility and independence. It may be realized in situations when individual and professional development of personality is progressive by its nature and it is irreversible advancement to new stage, having realized previous results and having attained experience of participation in developing activity of different aspects.

Modal building of future specialists in agrarian field professional mobility formation is realized in account of qualification requirements which are formed free of educational system and are accompanied by psychological problems such as necessity to overcome psychological barrier of transition from position of salaried employee to position of active subject on labour market which means looking for a highly paid job by himself, ability to work in different places, ability to study individually and to attain knowledge, abilities and skills and so on. Such situation preconditions necessity to pass individual decisions requires young people teaching and getting such basic schooling which will help them to easily master new convert professions in future; able to work people division into two categories, which is going on through peculiarities of high technologies development – vocational elite and other workers which can relatively easily move from one professional activity to another, from one sphere to another under the influence of juncture changes in economy or for individual motive.

Problems, peculiarities and tasks mentioned above must be taken into consideration while building a model of future specialists in agrarian sphere professional mobility formation.

Key words: professional mobility, future specialists in agrarian sphere, psychological barrier, vocational elite, professional activity
